

PROJECT REPORT: ***PIZZA HUT MANAGEMENT SYSTEM***

GROUP MEMBERS:

- ❖ SANIA ARSHAD(098)
- ❖ EMAN WAHEED(027)
- ❖ AIMEN HUSSIAN(002)
- ❖ SUMAIRA YASMEEN(086)

SEMESTER: 4(A)

INSTRUCTOR: MRS. MUHAMMAD SHOAIB

COURSE: ADVANCED DBMS

PIZZA HUT MANAGEMENT SYSTEM

1. Abstract / Project Overview :

This project is a web-based Pizza Ordering System designed to allow users (clients) to place pizza orders and submit feedback, while providing admin users with access to customer orders and feedback for monitoring and management. The system is built using PHP, HTML, CSS, and MySQL and runs on a local XAMPP server. It includes secure user login, data validation, and relational database design.

2. Introduction:

i. Background and purpose of the project:

The system was developed to simulate a real-world pizza ordering platform where clients can view a menu, place orders, and provide feedback. Admin users can view all orders and feedback in a secure panel.

ii. Tools & technologies used (HTML, CSS, PHP, MySQL, XAMPP, etc.):

- ✓ **Frontend:** HTML5, CSS3
- ✓ **Backend:** PHP
- ✓ **Database:** MySQL
- ✓ **Server:** XAMPP (Apache, MySQL)
- ✓ **Editor:** Visual Studio Code

3. Project Screenshots:

4.1 Home Page – [index.php](http://localhost/project/index.php):

Link: <http://localhost/project/index.php>

Screenshot:

Description:

This is the welcome page of the Pizza Ordering System. It displays a full-screen pizza background and two main buttons: **Sign In** and **Sign Up**, allowing users to begin using the system.

4.2 Login Page – **login.php**

Link: <http://localhost/project/login.php>

Screenshot:

The screenshot shows a login form titled "Login" on a light yellow background. It includes a "Role:" dropdown menu with "-- Select Role --" as the selected option. Below this are input fields for "Email:" and "Password:". A "Login" button is positioned below the password field. At the bottom, there is a link that says "Don't have an account? [Sign Up](#)".

Description:

This page allows users to log in as either an **Admin** or a **Client**. It includes a dropdown for role selection and secure fields for email and password. Valid login redirects users to their respective dashboards.

4.3 Registration Page – **register.php**

Link: <http://localhost/project/register.php>

Screenshot:

The screenshot shows a registration form titled "Register as Client" on a light yellow background. It features a vertical list of input fields: "Full Name", "Email", "Address", "Phone Number", and "Password". A "Register" button is located below the password field. At the bottom, there is a link that says "Already registered? [Login here](#)".

Description:

Clients can register by filling out this form. It collects their name, email, address, phone number, and password. Upon successful registration, data is stored in the customers table and users are directed to log in.

4.4 Client Dashboard – [home.php](#)

Link: <http://localhost/project/home.php>

Screenshot:

**Description:**

After login, clients access this dashboard. It allows them to order pizza, contact admin personally, view reviews, site stats, can see my orders and submit feedback. A session message confirms the login and personalized access.

4.5 Admin Orders Page – [admin_orders.php](#)

Link: http://localhost/project/admin_orders.php

Screenshot:

Admin Panel

Home

All Orders

Order ID	Customer	Order Date	Total Amount
38	sania arshad	2025-05-27 15:29:37	Rs. 2,200.00
37	Eman Waheed	2025-05-27 14:56:32	Rs. 1,400.00
36	Eman Waheed	2025-05-27 13:41:05	Rs. 2,400.00
35	sania arshad	2025-05-27 11:40:01	Rs. 0.00
34	sania arshad	2025-05-27 11:12:12	Rs. 0.00
33	sanhh	2025-05-21 14:20:01	Rs. 0.00
32	sania shafique	2025-05-21 14:09:38	Rs. 0.00
31	Maria	2025-05-20 12:39:54	Rs. 0.00
30	ali	2025-05-20 12:25:13	Rs. 0.00
29	aimen	2025-05-20 12:23:42	Rs. 0.00
28	sumaira	2025-05-20 12:15:54	Rs. 0.00
27	kiran ahmad	2025-05-20 12:13:40	Rs. 0.00
26	sania arshad	2025-05-20 12:11:00	Rs. 0.00
25	kiran ahmad	2025-05-20 12:08:20	Rs. 0.00
24	eman waheed	2025-05-20 12:05:49	Rs. 0.00
23	ali	2025-05-20 11:28:41	Rs. 0.00
22	Zainab Hussain	2025-05-08 13:35:00	Rs. 2,200.00
21	Yasir Shah	2025-05-08 13:30:00	Rs. 2,650.00
20	Maira Akhtar	2025-05-08 13:25:00	Rs. 1,800.00
19	Fahad Latif	2025-05-08 13:20:00	Rs. 3,000.00
18	Saba Rehman	2025-05-08 13:15:00	Rs. 1,550.00

Description:

Admins use this page to view all customer orders. The data is fetched using a SQL **JOIN** between orders and customers, and includes order ID, customer name, order date, and total amount.

4.6 Feedback Page – **feedback.php**

Link: <http://localhost/project/feedback.php>

Screenshot:

The screenshot shows a web browser window with the address bar displaying 'localhost/project/feedback.php'. The page has a light yellow background. At the top, there are links for Gmail, YouTube, and Maps. Below these, the form contains the following elements: a 'Name:' label followed by a text input field; a 'Comment:' label followed by a larger text area; a 'Rating (1-5):' label followed by a small input field; and a 'Submit Feedback' button at the bottom.

Description:

Clients can leave ratings and comments. Feedback is saved in the feedback table and reviewed by the admin from their dashboard.

4.7 Order Form Page – **order.php** or inside **home.php**

Link: <http://localhost/project/order.php> (or embedded in *home.php*)

Screenshot:

Place Your Order

Choose Pizza:

Quantity:

Your Name:

Phone:

Address:

Select Payment Method:

Description:

This form allows clients to place an order by selecting a pizza, size, quantity, and providing contact details. On submission, order info is stored in the database and visible to admins.

Payment Method Integration.....Functionality Added in Page:

Payment method selection (Cash or Card) was added during the order placement process.

How it works:

- In the order.php form, the user selects a payment method.
- The selected method is stored in the payments table via submit_order.php.
- When viewing order history in my_orders.php, the payment method is shown beside the order.

4.8 Admin Dashboard – [admin_panel](#)

Link: http://localhost/project/admin_panel.php

ScreenShot:

**Description:**

After login, admin access this dashboard. It allows them to view orders, view feedback and log out. A session message confirms the login and personalized access.

4.9 Admin Feedback Page – [view_feedback.php](#)

Link: http://localhost/project/view_feedback.php

Screenshot:

Customer Feedback

ID	Customer	Rating	Comment	Date
23	sania arshad	4	good!	2025-05-27 15:30:05
22	sania arshad	5	best!	2025-05-27 11:14:37
21	ali	5	fantastic!	2025-05-20 11:29:18
20	Bilal Raza	3	Not as expected, could be better.	2025-05-17 16:05:55
19	Fatima Ali	5	Superb pizza and excellent service.	2025-05-17 12:25:30
18	Ahmed Khan	4	Nice flavor, would order again.	2025-05-16 14:45:12
17	Sara Khan	3	Decent taste, but a bit oily.	2025-05-16 11:10:33
16	Ali Raza	5	Perfect pizza and speedy delivery!	2025-05-15 13:50:42
15	Bilal Raza	4	Good pizza but packaging was damaged.	2025-05-15 09:15:18
14	Fatima Ali	2	Cold pizza and late delivery.	2025-05-14 17:25:30
13	Ahmed Khan	5	Loved the flavor and quick delivery!	2025-05-14 10:40:50
12	Sara Khan	4	Tasty pizza but order was incomplete.	2025-05-13 15:35:25
11	Ali Raza	3	Delivery took too long.	2025-05-13 12:00:00
10	Bilal Raza	5	Best pizza I have had in a while!	2025-05-12 18:10:05
9	Fatima Ali	4	Nice crust and fresh ingredients.	2025-05-12 11:30:22
8	Sara Khan	3	Average pizza, not very flavorful.	2025-05-11 16:55:45
7	Ahmed Khan	5	Excellent quality, will order again!	2025-05-11 09:20:00
6	Ali Raza	4	Good taste but missing some toppings.	2025-05-10 14:15:40
5	Bilal Raza	2	Order was delayed and pizza was soggy.	2025-05-10 10:05:12
4	Fatima Ali	5	Fast delivery and tasty pizza!	2025-05-09 13:45:30
3	Ahmed Khan	3	Pizza was okay, but could be hotter.	2025-05-09 12:10:20

Description:

Admins can use this page to **view all feedback** submitted by clients. It uses a SQL JOIN between feedback, orders, and customers to display feedback with customer names and related order IDs. Admins can monitor customer satisfaction through this section.

4.10 Contact Admin Page – [contact.php](#)

Link: <http://localhost/project/contact.php>

Screenshot:

Description:

This page is accessible only after the client logs in. It displays the **admin's contact information**, including:

-  Admin email address
-  Admin phone number
-  Link to the official Pizza Hut website

This helps clients easily reach the admin outside the system for any urgent queries, complaints, or suggestions.

4.11 client Dashboard-View_Reviews.php

Link: http://localhost/project/view_reviews.php

Screenshot:

Description:

This page is accessible only after the client logs in. It displays the **previous customers rating, feedback and created_at.**

4.12 client Dashboard-site_stats.php

Link: http://localhost/project/site_stats.php

Screenshot:

Description:

This page is accessible only after the client logs in. It displays the **previous customers registered, orders placed and feedback entries.**

4.13 – My Orders Page-my_orders.php:

Link: http://localhost/project/my_orders.php

Screenshot:

Order ID	Date	Total (Rs)	Status	Payment Method
No orders found yet.				

Description:

This page displays the logged-in customer's order history in a table format. For each order, the following details are shown:

-  **Order ID**
-  **Order Date**
-  **Total Amount**
-  **Order Status** (Pending, Delivered, Cancelled)
-  **Payment Method** (Cash or Card)

The page retrieves this information using a `LEFT JOIN` between the `orders` and `payments` tables based on the customer's session ID. It dynamically shows "Not Recorded" if the payment entry hasn't been made yet.

4. Database Design:

i. List of tables created (table names, columns, primary keys):

Table Name	Columns (Primary Key marked with *)
customers	customer_id, name, phone, address, email, password, created_at
orders	order_id, customer_id (FK), order_date, status, total_amount
order_details	detail_id, order_id (FK), pizza_id (FK), quantity, price, size
pizzas	pizza_id, name, size, crust, price, available
feedback	feedback_id, customer_id (FK), order_id (FK), rating, comment, created_at
payments	payment_id, order_id (FK), amount, payment_method, payment_date
users	user_id, username, password, full_name, role, phone, email

ii. ER Diagram or relational diagram (if applicable):

5. Database Connection:

i. Code snippet for the PHP database connection:

ii. Explanation of connection parameters (host, username, password, db name):

Parameter	Value	Explanation
localhost	XAMPP local server	Refers to the local machine where Apache and MySQL are running. It's the default hostname used when connecting to a local MySQL server.
root	Default MySQL user	The default administrator account provided by MySQL with full privileges on the local server.
"" (empty string)	No password (default in XAMPP)	XAMPP MySQL comes with no password for the root user by default, allowing easier local development.
pizza_hut	Name of the database used in this project	This is the name of the MySQL database that stores all project tables like orders, customers, and feedback.

6. SQL Queries & Integration:

i. Code snippets in PHP where SQL queries are used (SELECT, INSERT, UPDATE, DELETE, JOINS, etc.)

1. INSERT (register.php):

```
$stmt = $conn->prepare("INSERT INTO customers (name, email, address, phone, password) VALUES (?, ?, ?, ?, ?)");
```

2. SELECT with JOIN (admin_orders.php):

```
$sql = "SELECT o.order_id, c.name, o.order_date, o.total_amount FROM orders o JOIN customers c ON o.customer_id = c.customer_id";
```

3. UPDATE (change order status):

```
$sql = "UPDATE orders SET status='Completed' WHERE order_id=?";
```

4. DELETE (remove feedback):

```
$sql = "DELETE FROM feedback WHERE feedback_id=?";
```

ii. Explanation of what each query does and where it's used in the website:

- **INSERT:** Used in registration and order form to save new user/order data.
- **SELECT:** Used in admin and client pages to fetch and display data.
- **UPDATE:** Used by admin to update order status (e.g., Completed).
- **DELETE:** Used to remove unwanted feedback or users by admin.
- **JOIN:** Used to display combined info (e.g., customer name with order).

7. Security Measures:

i. Steps taken to prevent SQL injection or security issues:

- All inputs are validated on the server.
- Passwords are hashed before storage.
- Users must log in to access their panels.
- Role-based access (client/admin) is enforced via sessions.

ii. Use of prepared statements (if applicable):

```
$stmt = $conn->prepare("INSERT INTO customers (name, email, address, phone, password) VALUES (?, ?, ?, ?, ?)");
```

```
$stmt->bind_param("sssss", $name, $email, $address, $phone, $hashed_password);
```

This ensures SQL injection is prevented.

8. Validation & Error Handling:

i. How form inputs are validated before inserting into the database:

- ✓ required attribute in HTML
- ✓ `filter_var($email, FILTER_VALIDATE_EMAIL)` in PHP
- ✓ `password_hash()` to securely hash passwords
- ✓ `isset()` and `empty()` used to check values

ii. Code snippets for input validation:

```
if (empty($_POST['email']) || !filter_var($_POST['email'], FILTER_VALIDATE_EMAIL)) {  
    echo "Invalid email address";  
}
```

iii. Error handling examples (if any):

```
if (!$stmt->execute()) {  
    echo "Error: " . $stmt->error;  
} else {  
    echo "Registration successful!";  
}
```

9. Challenges & Learnings:

i. Brief summary of challenges faced during the project:

- ✓ Understanding how JOIN queries work
- ✓ Managing sessions for role-based login
- ✓ Debugging form data not saving in the correct table
- ✓ Handling dynamic pricing logic in orders

ii. Key learnings:

- ✓ Use of SQL JOINS for combining relational data
- ✓ Role-based access using sessions in PHP
- ✓ Importance of secure coding (prepared statements & validation)
- ✓ Developing a real-world full-stack web application

10.Conclusion:

i. Summary of project outcomes:

This project successfully implements a complete web-based pizza ordering system using PHP and MySQL. It supports multiple user roles, real-time database interaction, and secure registration/login functionality. Through this project, we gained valuable experience in backend development, database design, form handling, and security.
